February 2012

Construction

Plans are being made for CariSal to begin construction in the first quarter of 2012. A formal public notification will be announced soon.

- Construction Contractor – Proman
- Construction will take a little more than 2 years
 - First, we will clear the site including removing the vegetation
 - Protect the wetland in the NW corner of the property
 - Protect against soil loss
 - Next the elevation will be adjusted and site drainage system installed
 - Next comes the pilings that will support the equipment, tanks and buildings
 - After 6-9 months the equipment begins to arrive and be put in place
 - Finally the buildings

This will be an exciting time for the area.

Proman and their contractors will hire approximately 400 people to work on the project and will continue their past practice of hiring predominantly from the local communities.

- CariSal will also begin to hire its permanent staff – managers, technical staff, then technicians and operators. We will let you know when to apply in the coming months.

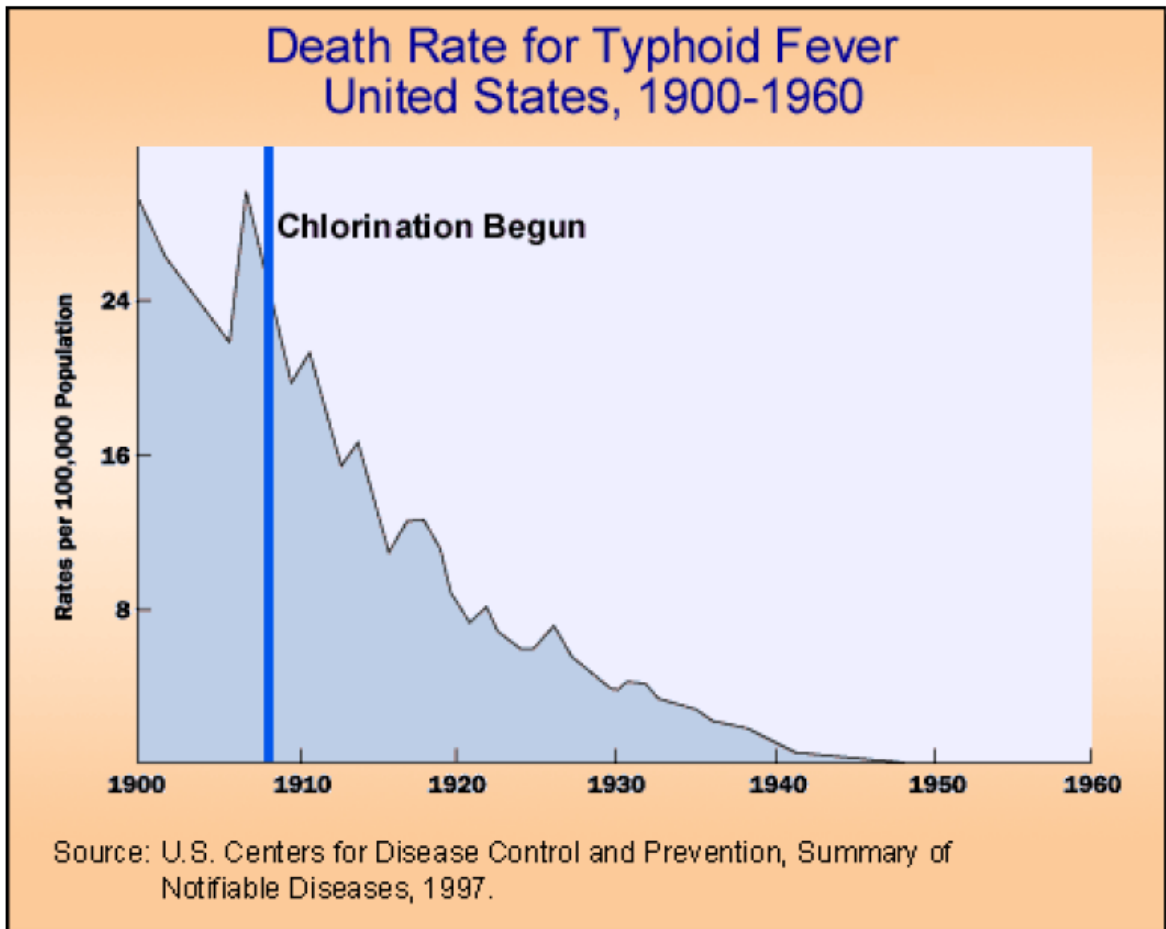

Products

When in operation the plant will consume high purity salt and limestone to produce Caustic Soda, Calcium Chloride, Hydrochloric Acid, and Bleach for merchant market sales.

Caustic Soda is used in the production of aluminum, paper products, and numerous industrial processes. Calcium chloride is a very important ingredient in oilfield drilling completion fluids. It is also used as a premium ice melt product and food applications. Calcium chloride is also used in road stabilization of unpaved roads to improve safety on the roads, reduce soil erosion and reduce dust which causes respiratory illnesses. Today bleach is used for water treatment in place of liquid chlorine because it is

safer and easier to handle. As depicted in the chart below, water chlorination has essentially eliminated deaths resulting from Typhoid Fever. CariSal will produce beach for use in this industry allowing its customers to replace Liquid Chlorine with the safer and easier to use bleach solution.

Many people wonder about the long term effects of these chemicals. Chlorine, Caustic Soda, Chlorine Bleach, Hydrochloric Acid and Calcium Chloride have been tested and shown not to cause cancer or birth defects. Safety systems built into the plant prevent public exposure. A major system failure is 1000 times less likely to happen than dying in an airplane accident.
